APPLICANT : TOSHIBA CORP;

INVENTOR : OKAMOTO TOSHIO;

INT.CL. : H04L 12/56 G09C 1/00 G09C 1/00 H04L 9/32

TITLE : PACKET TRANSFER METHOD, PACKET PROCESSOR, PACKET CIPHERING METHOD, PACKET DECODING METHOD AND PACKET CIPHERING PROCESSING METHOD

ABSTRACT : PROBLEM TO BE SOLVED: To confirm the adequacy of each packet in each packet processing unit by conducting verification processing among packet processing units each managing a transmission source computer and a destination computer.

SOLUTION: Computers H3, H4 are directly contained respectively in management networks A1, A in the computer network. A packet passes security gateway GA while it is reached finally to a destination host from a source host. Each GA executes packet verification processing in the case of transmission of a packet externally or reception of the packet, and a verification key is provided link by ink in a form along with a passing path among the GAs. A GA in existence in a packet path transfers packets to its adjacent GA while repeating code resetting due to check/generation of a packet verification code.
